RESEARCH EXPERIENCE

[1] "The Value of Employee Morale Similarity in Mergers and Acquisitions: Evidence from Glassdoor" (Solo-Authored – <u>SSRN Link</u>) – Presented at FMA European Meeting: Doctoral Student Consortium (2022), World Finance Conference (2022), Paris Financial Management Conference (2022), SGF Conference: Ph.D. Poster Session (2023), EFMA Annual Meeting (2023), MFS Conference (2023), ASFAAG Conference (2023), EFA Annual Meeting: Poster Session (2023), and FMA Annual Meeting (2023)

Abstract: In this paper, I define employee morale as employees' attitudes toward and perceptions of the tasks employees have in the companies they work for and various firm dynamics. I explore how employee morale affects merger probability, post-merger value, performance, integration, and merged firm employee morale using various proxies. The paper makes several novel findings. Firms with similar employee morale are more likely to merge, achieve greater short-run and long-run post-merger synergies, perform greater takeover restructurings, and exhibit a higher likelihood of completion and rate of completion. Firms with similar morale achieve better post-merger integration than those with dissimilar morale. The high morale of target employees enhances post-merger morale and subsequently enhances the performance of the acquiring company. This finding points to the transmission of target employees' morale to acquirer employees' morale as a channel of improved performance. I find that acquiring companies value the employee morale profile of target companies and that they bid for target companies with high morale.

[2] "Untangling Employee Morale Similarity in Private Equity Deals" (Solo-Authored)

Abstract: The paper documents evidence of private equity's focus on post-acquisition performance and their expertise in managing and integrating companies with different attributes. I make the following findings. For the average company in the sample, private equity is more likely to merge with companies with dissimilar employee morale. The search for companies with dissimilarities points to private equity acquirers performing a pre-deal screening process wherein both companies learn about each other and match with each other. Following the acquisition, due to private equity's experience with managing companies with dissimilarities, they grow the companies they acquire, increase operating performance and efficiency of target companies with dissimilarities. This also points to private equity viewing companies with dissimilarities as value-enhancing. For companies with similarities, private equity hurts long-term performance. It is likely that private equity will decide to let go of less efficient workers to achieve those performance goals in dissimilar firms where target employees fit in private equity culture less.

[3] "Predicting Bankruptcy: Ask the Employees" (Co-Authored with John Knopf – <u>SSRN Link</u>) – Presented at FMA Annual Meeting – New Ideas Session (2022), World Finance Conference (2023), FMA Annual Meeting (2023), Michigan State University (2024)^{*}, and International Business Analytics Conference for Academics and Industry Professionals (2024)^{*}

Abstract: The purpose of the paper is to show that employees sense problems within their companies before financials show it. We test our bankruptcy prediction model, which reflects employees' attitudes before

bankruptcy filings and include key variables from the already-established bankruptcy models in the literature in our model, against other already-established bankruptcy prediction models from the literature using a dataset from 2008 to 2020. We find that our model more accurately predicts bankruptcy two to three years before bankruptcy filings, while the other models are more accurate in the year prior to the bankruptcy. While already-established models' predictive power increases the closer we get to bankruptcy filings, our model's predictive power, compared to other models, is higher the further we move from bankruptcy filings. Moreover, addition of employee satisfaction into already-established models improves their predictive performance. We create neural network models consisting of reviews and ratings separately and show that textual reviews provide additional predictive power for bankruptcy filings on top of rating and financial information. In survival analyses, we show that employee satisfaction (both in terms of aggregated and individual rating categories) is a strong predictor whether a company would emerge from bankruptcy successfully one, two, and three years before bankruptcy filings. Our paper is the first paper to show that employee satisfaction is a more powerful predictor of bankruptcy emergence than financial and market data.
